

Phire

Application Change Management Solution for PeopleSoft

MANAGE AND CONTROL CHANGES TO YOUR ERP SYSTEMS

Phire simplifies and automates the management of your PeopleSoft enterprise applications from initial implementation through ongoing support and upgrades. This is accomplished through code version control, object/file locking, change process workflow, release management, and powerful reporting and auditing capabilities.

WHAT IS PHIRE?

Phire is an Application Change Management (ACM) solution built using PeopleTools that helps organizations better manage and control changes that are necessary for PeopleSoft and other enterprise applications. Phire enables enforcement of change controls, code versioning, and automates the code migration process with rollback capabilities.

WHY PHIRE?

Phire does not require any new infrastructure investments for PeopleSoft customers because it uses the same technical architecture as PeopleSoft applications. Phire is easy to support because technical development and administration knowledge is already in-house and end users are familiar with the user interface. Phire has a wizard driven setup which enables rapid deployment in days, not months. Phire's enterprise license option offers unlimited users and installations to customers making Phire a very cost-effective solution.

FEATURES AND BENEFITS

Optimize Change Management Processes

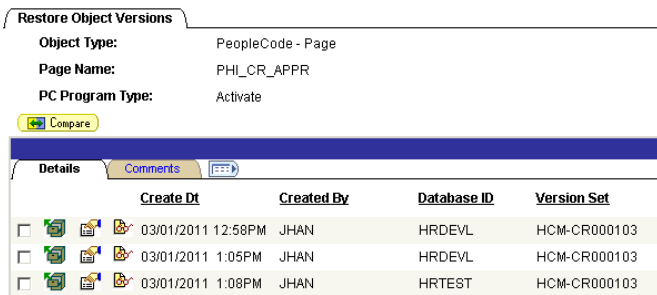

Phire enables you to automate complex change management processes and implement controls that are necessary for compliance and audibility. With Phire, task routings and notifications are automated resulting in efficient communications. Phire's flexibility means that you can easily model your organization's change management processes in Phire so that you can enforce the required controls and build custom workflow tasks, routings, efficient notifications, and approvals.

Step	Task Name	Assigned To	Task Type
1	✓ Add Objects to CR	DMILLS	Development Task
2	✓ Development	DMILLS	Development Task
3	✓ Create Migration Set	DMILLS	Development Task
4	✓ Create Migration Note	DMILLS	Development Task
5	✓ Request Migration to TEST	DMILLS	Development Task
6	✓ Migrate to TEST	PHI_MIGRATOR_ROLE	Migration Task
7	✓ Verify Migration	PHI_MIGRATOR_ROLE	Migration Task
8	✓ System Testing	PHI_TESTER_ROLE	Testing Task
9	➔ Approve Migration to PROD	LJONES	Approval Task
10	⚠ Migrate to PROD	PHI_MIGRATOR_ROLE	Migration Task
11	⚠ Close CR	PHI_MIGRATOR_ROLE	Migration Task

Change Request workflow tasks

Accelerate Application Development

Phire helps reduce your support costs and mitigate the risks associated with the quality and reliability of your enterprise system code. Phire versions and stores all the PeopleTools and File objects in the Architect repository. This reduces the risks of overwrites or lost development work by giving your team the power to immediately restore any object version without having to perform time-consuming database refreshes. Architect also prevents development conflicts by allowing your team to reserve and lock PeopleTools objects across all your environments. The code compare feature enables you to view the differences in code between environments and any previous versions so that you have a complete record of all the code changes that are made.

PeopleTools Object Versions

Reduce Costs and Risk with Greater Visibility and Control

By maintaining thorough documentation of all change requests and approvals, you have a central repository and undisputable audit trail of activities that occur through the systems lifecycle from incident identification, design, development, testing, migrations, and production support.

Because all activities associated with incidents and code changes are captured and documented in real time, Phire serves as the central repository for compliance reporting, researching issues, locating prior resolutions, and history of customizations and requirements. A centralized repository of issues and resolutions enables efficient resolution of issues and facilitates knowledge sharing as personnel change over time.

Integrate with Incident Management

Phire has an integrated Incident Management repository that can be used as the primary help desk application for ERP support activities, or it can be configured to integrate with an existing enterprise help desk tool.

Support Systems Development Lifecycle

Phire supports all phases of the enterprise systems lifecycle from requirements gathering, design, development, testing, deployment, production support, and application upgrade. Phire has built in features that support each of these functions in a fully integrated manner. For example, you can create a business requirement document in Phire, associate functional and technical specifications to the requirements, and create test scripts. As testing is completed, application failures are reported as Incidents which result in code Change Requests that are processed in Phire with code version control, approvals, and automated migrations.

Achieve Compliance

Phire is a tool that enables companies to achieve regulatory and internal compliance by enforcing controls, implementing established change management processes, and meeting reporting requirements. With Architect, you will be able to implement Sarbanes-Oxley (SOX) practices such as Segregation of Duties and Gated Processes. Delivered with Phire is a set of SOX compliance reports that show the effectiveness of the controls you have implemented as well as

reports that show security violations in your enterprise applications, migration exceptions, and history of configuration changes.

SOX Security Report

FEATURES LIST

- ◆ Change Process Tracking with Workflow
- ◆ Code Version Control (PeopleTools and File Objects)
- ◆ Code Compare Reports in HTML Format
- ◆ Automate and Schedule Code Migrations
- ◆ Automate Application Designer Project Builds
- ◆ Execute DMS, SQL, and OS Scripts
- ◆ Integrated with Data Migration Workbench
- ◆ Code Object Locking
- ◆ Controls for Segregation of Duties
- ◆ Automate Task Assignments and Notifications
- ◆ Incident Management (Helpdesk)
- ◆ Compliance and Management Reports
- ◆ Online Real-Time Change Audit History
- ◆ Wizard Driven Setup and Configuration

BENEFITS

- ◆ Lower Total Cost of Ownership of ERP application
- ◆ Reduce Downtime with Code Rollback Capability
- ◆ Improve Quality of Deliverables
- ◆ Reduce Time to Perform Migrations
- ◆ Achieve Compliance and Audit Requirements
- ◆ Leverage Existing Infrastructure

LONG TERM STRATEGIC PARTNER

A solution is only as good as the company that stands behind it. That is why Phire is committed to innovative, enterprise-class solutions that are cost effective. Our goal is to help you increase the value of your enterprise systems while enabling your organization more resources to solve your most important business challenges. As your long-term business partner, Phire will work with you to help ensure that our solutions grow along with your business—making your technology investment an asset that increases in value.
